

BEFORE
THE PUBLIC SERVICE COMMISSION OF
SOUTH CAROLINA
DOCKET NO. 90-32-E - ORDER NO. 90-82
MARCH 12, 1990

IN RE: Application by Carolina Power)
 and Light Company for Approval) ORDER APPROVING
 of Experimental Tariff Schedule) TARIFF
 LGS-CUR-TOU-69 - Large General)
 Service-Curtailable)

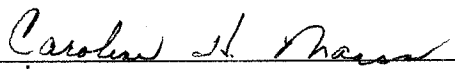

On January 10, 1990, Carolina Power and Light Company (CP&L) filed for approval with the Public Service Commission of South Carolina (the Commission) a proposed Large General Service-Curtailable (Experimental) Schedule LGS-CUR-TOU-69 Tariff. This schedule is available for electric service used by a non-residential customer with a contract demand that equals or exceeds 10,000 KW of firm demand. This rate is available for a maximum of 150,000 KW of total system curtailable load.

The Commission finds that this experimental tariff should be approved. The Commission further finds that should a customer be removed from this tariff due to being found intentionally buying through a "Capacity Curtailment Period" he shall, at the Company's option, be placed on the appropriate tariff and curtailable rider in effect at that time for the remaining duration of their service contract or agreement under this tariff. The Commission encourages CP&L to give as much notice of a requested curtailment as reasonably possible and to limit curtailments only to the

mwc

amount of time reasonably necessary to satisfy the need, within the criteria of the rate schedule. CP&L is required to submit a quarterly report to the Commission Electric Department of its curtailments, identifying the date, time, type (economic or capacity) and number of megawatts curtailed (both in North and South Carolina). CP&L should file with the Commission twenty-five (25) copies of the tariff within ten (10) days from the date of the Order. The tariff is effective for service rendered on or after January 11, 1990.
